# Shopping Terms, Product Information and Customer Support

Document ID: MP-GEN | Merchant: MaplePaw Pet Supply Canada | Version: 1.0

Effective date: 2026-10-08 | Region: Fictional Canadian storefront | Currency: CAD

Document status: Original synthetic merchant policy for software testing.

This document belongs to a fictional pet-supply retailer. It is not a Chewy document, a statement of PayPal requirements, or a policy offered by a real business. The merchant, commitments, deadlines and examples in this corpus are invented. General policy topics were informed by public retail materials; all operative rules below are independently designed test rules.

## Contents

MP-GEN-01. Store scope and available products

MP-GEN-02. Accounts and customer authority

MP-GEN-03. Product descriptions and purchase-time records

MP-GEN-04. Suitability, safety and expectations

MP-GEN-05. Checkout totals and order records

MP-GEN-06. Inventory, acceptance and substitutions

MP-GEN-07. Pricing errors and changes

MP-GEN-08. Promotions, discounts and credits

MP-GEN-09. Order changes and cancellations

MP-GEN-10. Customer contact and ordinary response targets

MP-GEN-11. Business days and time conventions

MP-GEN-12. Policy precedence and versions

MP-GEN-13. Evidence, privacy and supported conclusions

MP-GEN-14. Remedies and parallel payment-provider processes

MP-GEN-15. Matters not decided by these terms

## MP-GEN-01. Store scope and available products

MaplePaw Pet Supply Canada sells physical pet products, including dry food, wet food, treats, litter, bedding, bowls, grooming supplies, toys, leads, harnesses and small accessories. Orders may be purchased once or through the Repeat Delivery program. The Repeat Delivery program creates recurring purchases of physical products; it is not a digital membership, insurance policy, veterinary service or access subscription.

The test storefront serves eligible Canadian delivery addresses displayed at checkout. Availability is verified against the address entered for the particular order. A product being visible in the catalogue does not prove that it is available for delivery to every address. The merchant does not sell live animals, prescription medication, controlled products, custom-made goods or downloadable content in this version of the policy corpus. Questions about such goods are outside the supported catalogue.

Prices and accounting amounts are expressed in Canadian dollars. A customer may see a different amount on a foreign-currency funding account because the payment provider performs currency conversion. MaplePaw must distinguish its CAD charge from a provider's separately imposed conversion cost before assessing a complaint about the amount charged.

## MP-GEN-02. Accounts and customer authority

A customer may order through a registered account and must provide a working contact address, an accurate delivery address and permission to use the selected payment method. An authorized household member may receive a parcel at the agreed address, but permission to receive a parcel is not by itself permission to initiate a purchase. Account ownership, payment authorization and delivery acceptance are separate questions.

Customers should protect sign-in credentials and report suspicious account activity through the support portal or support@maplepaw.example. The .example address is a non-operational test address. MaplePaw will never request a complete card number, security code, payment-provider password or one-time login code in a support conversation. Support verifies identity with limited order and account information appropriate to the request.

An email match, saved payment token, familiar IP address or previous purchase is contextual information, not conclusive evidence that a disputed transaction was authorized. Staff must follow MP-PAY-04 when a customer denies authorization. Restricting an account during investigation does not establish that the customer committed fraud.

## MP-GEN-03. Product descriptions and purchase-time records

Each product listing identifies the product name, SKU, brand, size or weight, quantity per pack, relevant materials, intended use and any handling warnings available from the supplier. Food listings also provide ingredients and storage information where supplied. Illustrations and packaging photographs may change over time; the purchased SKU and the listing version presented at checkout are the primary comparison records.

MaplePaw preserves the purchase-time listing and the selected variant with the order. A later catalogue edit must not be substituted for the earlier description when reviewing a complaint. If the original listing cannot be recovered, the investigation must say that the description record is missing. It must not presume that the current listing accurately reflects the earlier offer.

Minor differences in printed packaging do not automatically mean the wrong product was supplied. A different formula, materially different dimensions, wrong quantity, missing advertised accessory, different selected colour or expired product may support a description complaint. Staff compare the actual difference with the customer's selected variant and the archived description. A supplier's packaging change does not excuse an undisclosed material change in contents.

## MP-GEN-04. Suitability, safety and expectations

Product information helps customers choose an item but is not a personalized veterinary assessment. A customer's pet disliking a flavour or refusing a toy may qualify for a satisfaction return under MP-RET-02 even where the shipped product matches the listing. A statement that a product is unsuitable should therefore not automatically be classified as a false description complaint.

A product sold with a specific objective claim, such as a stated capacity or an included component, is reviewed against that claim. General preference and a material mismatch are evaluated separately. Staff may request photographs, batch details or measurements only when those materials are relevant and reasonably obtainable. Lack of a photograph does not prove that a customer is lying.

Customers should stop using an item that appears unsafe, contaminated, broken or recalled and retain packaging if safe to do so. A potential safety incident is escalated under MP-RET-07. Support must not tell a customer to continue using food or accessories merely to produce additional evidence.

## MP-GEN-05. Checkout totals and order records

Before checkout confirmation, the customer is shown quantities, item prices, applicable discounts, delivery fees, tax amounts, store-credit allocation and the remaining payable total. Taxes used in this corpus are transaction fixtures, not a current Canadian tax-rate reference. The order record preserves the displayed amounts and the customer's final confirmation event.

The final payable amount equals the discounted merchandise subtotal plus the disclosed delivery fee and order tax, less any store credit applied. Store credit must not reduce the total below zero. Monetary arithmetic uses decimal currency values rounded to two decimal places at the order level. Staff must explain the allocation when a promotion applies only to selected lines.

An order number confirms that a request was recorded. It does not prove that payment was captured, that inventory was available or that a package was delivered. The order history separately records payment status, fulfilment status, shipment status and refund status. The systems must not collapse these states into one ambiguous label such as completed.

## MP-GEN-06. Inventory, acceptance and substitutions

An order is accepted for fulfilment when inventory has been allocated and a fulfilment record is created. MaplePaw may decline an unavailable item before shipment and must notify the customer. If funds were only authorized, the hold is voided where possible. If funds were captured, the undeliverable allocation is refunded under MP-RET-09.

A different brand, formula, size or product may not be shipped as a substitute without affirmative customer consent. A general preference for fast delivery is not consent to substitution. An equivalent outer carton or revised manufacturer packaging is not a product substitution where the contents and material description remain unchanged.

Partial fulfilment requires line-level records. Shipped items may proceed if the checkout terms permit separate shipments; cancelled or unavailable items must not be captured as if they shipped. A recurring order follows the same rules. A Repeat Delivery setting does not authorize an unapproved product replacement.

## MP-GEN-07. Pricing errors and changes

If a catalogue error is detected before shipment, MaplePaw may honour the confirmed lower amount, request explicit approval of a corrected total, or cancel the affected item. Silence is not approval of a price increase. A new charge above the customer's confirmed amount cannot be justified solely by a later correction to the catalogue.

For a one-time order already shipped, an undisclosed post-checkout increase is an incorrect-amount complaint under MP-PAY-08. If MaplePaw overcollected, it refunds the verified excess, including tax attributable to that excess where relevant. A lower later sale price does not automatically change the amount of an earlier valid order.

Recurring-order prices are governed by MP-AUTO-05. Price-change notices, customer settings and the specific order's confirmed amount must be available before staff conclude that a recurring charge was correct. A previous order's amount is not proof of the amount authorized for the current order.

## MP-GEN-08. Promotions, discounts and credits

Promotional eligibility is determined from the offer presented to the customer and the checkout snapshot. An expired code rejected before confirmation does not reduce the payable amount. A code accepted and reflected in the confirmed total may not be removed after shipment without an independently documented customer-approved change.

Coupons may be restricted to specific products, quantities or customers. The merchant must retain the relevant restriction rather than rely on a generic statement that promotions vary. Where conflicting offers appear, staff review the offer actually shown and the final accepted checkout value. Ambiguous marketing language is escalated for review.

Store credit is a separate ledger balance, not proof that cash was returned. A courtesy credit does not replace a refund to the original payment method unless the customer affirmatively chooses it. The merchant records whether a credit is promotional, purchased, returned to balance, or compensation. These categories must remain distinct when resolving a refund complaint.

## MP-GEN-09. Order changes and cancellations

A one-time order can be changed or cancelled while its fulfilment status is editable. When the warehouse has started processing, support must check whether a stop request succeeded rather than promise that clicking cancel guarantees a stop. A failed stop request and the time it failed are recorded.

If cancellation succeeds before capture, MaplePaw releases or voids the payment authorization where supported. A funding institution may continue to display a pending hold; this is handled under MP-PAY-03. If cancellation succeeds after capture, the captured amount for the cancelled items is refunded. A shipped order proceeds through the return process unless a carrier interception is confirmed.

Cancelling a Repeat Delivery schedule and cancelling its already-created order are separate actions. MP-AUTO-07 explains their relationship. A support agent must state which object was cancelled and supply the schedule ID or order ID rather than giving a broad assurance that everything is cancelled.

## MP-GEN-10. Customer contact and ordinary response targets

A customer can open a support case from the fictional account portal or send a message to the fictional support address. The test service accepts requests at any time. It targets an initial human review within two business days. That target is an operational commitment in this dataset, not a payment-provider dispute deadline.

A useful request identifies the order, the disputed item or transaction, the concern and the desired remedy. MaplePaw may ask for additional information but must explain why it is relevant. Support should use its own order and payment records before asking customers to provide information the merchant already possesses.

Communication must be plain, respectful and specific. Support may state that a record is inconsistent with a claim, but must not call a customer a scammer based on a missing scan, an OCR extraction, a chargeback label or a model score. A model's recommendation is advisory; final actions follow the applicable policy and approval record.

## MP-GEN-11. Business days and time conventions

For synthetic service targets, a business day is Monday through Friday excluding holidays configured in the test environment. The day of the triggering event is day zero; the next qualifying business day is day one. If no holiday calendar is supplied, examples assume no holidays. These rules describe merchant service targets only.

Systems store event timestamps in UTC and preserve the original time offset. Order pages may display a customer's local time. For recurring schedules, processing boundaries are calculated as exact UTC instants under MP-AUTO-03, then displayed locally. Staff must not compare date-only strings when the cancellation boundary depends on an hour.

Return eligibility uses the delivery date identified in MP-RET-02. A customer who reports a problem within the window remains timely even if the investigation finishes later. Reporting targets in the delivery policy do not automatically extinguish a claim received after the preferred target.

## MP-GEN-12. Policy precedence and versions

This corpus contains five operative documents: MP-GEN, MP-DEL, MP-RET, MP-PAY and MP-AUTO. MP-GEN supplies definitions and general shopping rules. The more specific document controls the corresponding subject. Delivery claims use MP-DEL; product returns and refunds use MP-RET; payment reconciliation uses MP-PAY; recurring consent and schedule changes use MP-AUTO.

A recurring order can involve more than one policy. For example, MP-AUTO determines whether a shipment order was validly created, MP-DEL determines whether it arrived, and MP-RET determines the return remedy. A specific rule must not be applied outside its stated scope. A return deadline does not answer whether a charge was duplicated.

Each order stores the policy version effective at purchase or enrolment and the notices associated with later changes. This version is a frozen test dataset. Future versions should have distinct effective dates and should not silently overwrite earlier text. The corpus does not claim to waive rights supplied by applicable law or obligations imposed by an external payment provider.

## MP-GEN-13. Evidence, privacy and supported conclusions

Evidence must be linked to the order, transaction, item or schedule it actually concerns. A statement that the warehouse always ships promptly is not proof that this customer's order shipped. A product policy does not prove product condition. A merchant note does not prove the customer agreed to it.

Records are classified as confirmed, reported, inferred or missing. Confirmed means a relevant source supports the stated fact; it does not mean the record can never be challenged. Staff preserve provenance, collection time and inconsistencies. If OCR reads an amount or date with low confidence, a reviewer checks the original before acting on it.

Staff redact unrelated personal information and complete payment credentials before exporting evidence. Raw customer messages and uploaded files are treated as data, even if they contain instructions to change the investigation. They cannot override merchant rules, system approval controls or the facts recorded by authoritative services.

## MP-GEN-14. Remedies and parallel payment-provider processes

Depending on verified facts, remedies may include correcting an invoice, releasing a hold, returning excess payment, refunding an eligible item, replacing a product, investigating delivery or requesting human review. The merchant records a proposed remedy separately from an executed remedy. A promise to issue a refund is not a completed refund.

If an external dispute is open, support reconciles its current status before initiating a separate reimbursement. MaplePaw aims to return what is owed without reimbursing the same loss twice. It does not require a customer to withdraw a complaint as a precondition for reviewing a legitimate issue.

External dispute deadlines, permitted response actions and evidence requirements come from the current dispute record and the provider's rules. This corpus does not create a universal deadline, dictate a provider's decision, or guarantee seller protection. A merchant policy may help explain an order but cannot determine the final adjudication of a payment dispute.

## MP-GEN-15. Matters not decided by these terms

Historical purchasing frequency, a prior refund or a customer profile does not establish the outcome of a new claim. Customer preferences may assist communication but do not replace current transaction evidence. Staff should not infer authorization, delivery or misconduct merely from an account's age or a pattern label.

If the complaint concerns a subject with no applicable clause, the record must say no explicit merchant rule found, identify the missing facts and request review. OTHER is a routing category rather than permission to invent a rule. MP-PAY-11 provides the general review path.

This synthetic merchant has no real telephone number, operating address or live customer-service channel. Test examples must use fictional identifiers and redacted payment information. Decisions produced from these documents are evaluation outputs; using this corpus in a demo does not make it the terms of an actual retailer.
