Dispute Coverage, Provenance and RAG Evaluation Guide

Document ID: MP-GUIDE | Merchant: MaplePaw Pet Supply Canada | Version: 1.0

Dataset date: 2026-10-08 | Language: English | Document role: Evaluation and corpus administration

Document status: Companion guide, not an operative customer-facing merchant policy.

This guide explains how the five fictional MaplePaw policy documents cover the nine application dispute labels. It separates original merchant rules from source inspiration and evaluation expectations. Do not ingest this guide or the test-case answer key into a merchant-policy index during a blind evaluation.

MP-GUIDE-13. Coverage: other

MP-GUIDE-14. Retrieval and metadata recommendations

MP-GUIDE-15. Evaluation questions and answer isolation

MP-GUIDE-16. Scoring and limitations

MP-GUIDE-01. Corpus identity and intended use

MaplePaw Pet Supply Canada is an invented merchant name used consistently across the corpus. It is not represented as a real corporation, affiliated retailer or legally cleared trademark. The documents contain no merchant logo, copied layout, product photography, actual operating address or real support contact. The support domain uses the reserved .example form.

The corpus is designed for a merchant-side dispute-assistance demo involving physical pet goods and recurring physical-goods delivery. It supports policy retrieval, factual comparison, evidence-gap detection and remedy recommendations. It is not a payment-provider rulebook or a calibrated outcome-prediction dataset.

All operative wording was composed for this task. Changing a merchant name alone would not make a copied policy original; this corpus instead uses independently drafted provisions, invented amounts, invented periods, explicit exception handling and synthetic scenarios. The source links below document topic inspiration rather than imported legal text.

MP-GUIDE-02. Source inspiration and authored additions

Public source S1 is Chewy Canada's FAQ: https://www.chewy.com/ca/app/content/faq, consulted on 2026-10-08. It informed the selection of topic families: physical-product ordering, shipment tracking, pending payment entries, split shipment billing, returns, original-route refunds and recurring delivery support. No source promise is being asserted as a MaplePaw fact.

Public source S2 is Chewy Canada's Terms of Use: https://www.chewy.com/ca/app/content/terms, consulted on 2026-10-08. It informed the inclusion of purchase descriptions, product differences, pricing, order records, accounts and customer support in a general shopping document. MaplePaw's clauses are not an edited reproduction of that contract.

Public source S3 is Chewy Canada's Autoship terms: https://www.chewy.com/ca/app/content/ans-terms, consulted on 2026-10-08. It informed the broad subjects of recurring consent, upcoming order notices, cycle pricing, funding, schedule changes and cancellation. MaplePaw uses its own coherent timeline and consent rules.

Independent test additions include unauthorized-payment triage, exact duplicate-collection reconciliation, approved alternative-payment matching, external-credit reconciliation, human approval rules, explicit evidence-state labels, unsafe-item handling, idempotency-aware retries and all evaluation expectations. These additions must not be attributed to Chewy or PayPal.

MP-GUIDE-03. Document inventory and ingestion role

MP-GEN, Shopping Terms, Product Information and Customer Support, supplies definitions, purchase-time descriptions, checkout totals, ordinary order changes, evidence boundaries and policy precedence. Its operative clause IDs run from MP-GEN-01 through MP-GEN-15.

MP-DEL, Shipping, Delivery and Missing Parcels Policy, supplies address checks, shipment states, partial receipt, delivered-but-missing investigations, operational loss, damage and delivery remedies. Its operative clause IDs run from MP-DEL-01 through MP-DEL-15.

MP-RET, Returns, Product Problems, Replacements and Refunds Policy, supplies eligibility, return operation, defects, refund allocation, funding destinations, processing states and approval controls. Its operative clause IDs run from MP-RET-01 through MP-RET-16.

MP-PAY, Payments, Billing Corrections and Transaction Complaints, supplies authorization, payment state, duplicate and incorrect collection, another-method payments, external disputes, uncertain outcomes and evidence. Its operative clause IDs run from MP-PAY-01 through MP-PAY-16.

MP-AUTO, Repeat Delivery Subscription and Recurring Billing Terms, supplies recurring consent, the timeline, notices, cycle prices, changes, cancellations and event-history review. Its operative clause IDs run from MP-AUTO-01 through MP-AUTO-16.

Only those five documents have dataset role merchant_policy. MP-GUIDE, test_cases.json, README and corpus_manifest.json support evaluation or administration. They are not merchant-policy authorities. The companion policy_clauses.jsonl contains one record for each complete operative clause, allowing direct policy ingestion without PDF extraction.

MP-GUIDE-04. Shared synthetic configuration

The corpus uses CAD, an effective date of 2026-10-08 and policy version 1.0. Standard delivery is free at a discounted merchandise subtotal of at least CAD 60.00, otherwise CAD 6.50. Store-credit redemption does not change that merchandise eligibility measure.

Estimated transit is two to five business days after authenticated carrier acceptance. Operational loss may be established by a carrier confirmation or an approved unresolved non-delivery at ten business days after acceptance. The preferred delivered-but-missing report target is seven calendar days, not a hard forfeiture condition.

The ordinary satisfaction report window is 180 calendar days after the affected line's delivery date. The return dispatch target is 21 calendar days after label issue. Inspection and refund submission target three business days after receipt or no-return approval. Expected account posting is five to ten business days after provider acceptance.

Repeat Delivery offers a five-percent eligible-line discount and no membership fee. Notices target 72 elapsed hours before dispatch; processing begins 48 elapsed hours before dispatch. A current-cycle change must be recorded strictly before processing start. There is no default permission to use an arbitrary backup payment method.

A gross proposed cash remedy of CAD 250.00 or more requires human approval. Authorization denial, safety concerns, material evidence conflicts and uncertain external credits require review regardless of amount. These values are test fixtures. Do not present them as a real Canadian legal minimum, actual carrier standard or provider guarantee.

MP-GUIDE-05. Coverage: merchandise or service not received

Application label: MERCHANDISE_OR_SERVICE_NOT_RECEIVED. The corpus principally tests non-receipt of physical goods. It does not supply terms for digital access or professional services, despite the broader wording of the label.

Primary clauses: MP-DEL-03 through MP-DEL-11. Supporting clauses: MP-PAY-02, MP-RET-09 and MP-PAY-10. Required facts normally include order and package linkage, affected quantities, confirmed destination, carrier events, acceptance date and enquiry outcome.

A label-only record supports a handover investigation, not a delivery finding. A delivered scan with unclear location requires review. Carrier-confirmed loss can support a missing-item remedy. A delivery record for another package cannot defeat the missing package claim.

The model should identify what shipment evidence proves, whether the loss threshold can be calculated and what facts remain absent. It should not convert a policy threshold into a guarantee that an external dispute will be won.

MP-GUIDE-06. Coverage: merchandise or service not as described

Application label: MERCHANDISE_OR_SERVICE_NOT_AS_DESCRIBED. Primary clauses: MP-GEN-03 and MP-RET-03 through MP-RET-07. Supporting clauses: MP-GEN-04, MP-RET-09 and MP-RET-14.

Required facts include the purchase-time description, selected SKU or variant, received product, quantity and relevant evidence of the claimed difference. A later catalogue page alone is insufficient to establish the earlier offer. Ordinary preference and a material mismatch are different findings but may both have a return path.

A wrong-size shipment can support correction. Opened packaging does not automatically disqualify a discovered defect. A damaged seal or possible contamination triggers safety review. The model should retrieve the exception as well as the ordinary return rule.

MP-GUIDE-07. Coverage: unauthorized transaction

Application label: UNAUTHORISED. Primary clauses: MP-PAY-04 and MP-GEN-02. Recurring cases also use MP-AUTO-02, MP-AUTO-06 and MP-AUTO-12.

Required facts include the disputed transaction reference, relationship to an order, available authorization or consent records, account-security report and fulfilment state. Explicit denial always requires human review in this corpus, even where delivery appears normal.

The intended test is whether the assistant keeps authorization separate from receipt. It must not claim that a tracking number, old account or saved token proves consent. Missing consent is an evidence gap, not by itself a definitive finding that a particular person committed fraud.

MP-GUIDE-08. Coverage: refund not processed

Application label: CREDIT_NOT_PROCESSED. Primary clauses: MP-PAY-05 and MP-RET-10 through MP-RET-12. Supporting clauses: MP-PAY-10 and MP-PAY-14.

Required facts include approved remedy, original capture, intended refund amount, provider refund ID, actual status, acceptance date and funding allocation. A chat promise, case number or store credit is not proof that the requested cash refund happened.

The assistant should distinguish an overdue merchant submission, a failed provider operation and a posting enquiry. It should not start the five-to-ten-business-day posting assumption at the initial complaint date.

MP-GUIDE-09. Coverage: duplicate transaction

Application label: DUPLICATE_TRANSACTION. Primary clauses: MP-PAY-02, MP-PAY-06 and MP-PAY-07. Supporting clauses: MP-PAY-10 and MP-PAY-14.

Required facts include both operation IDs, collected versus pending status, order linkage, package allocations, legitimate payable total, reversals and completed refunds. A pending hold plus a single valid capture ordinarily requires explanation, not a duplicate refund.

Two settled full-order captures for the same obligation can support correction of the excess. Split-package captures may be valid if their allocations do not overlap and their total remains within the confirmed amount. Similar timestamps alone do not settle the classification.

MP-GUIDE-10. Coverage: incorrect amount

Application label: INCORRECT_AMOUNT. Primary clauses: MP-GEN-05, MP-GEN-07, MP-GEN-08 and MP-PAY-08. Recurring cases additionally use MP-AUTO-05.

Required facts include the confirmed total, item quantities, accepted discount, delivery fee, fixture tax, credit allocation, currency and collected amount. The assistant compares like currencies and separates issuer or conversion costs from the merchant's own collected amount.

It should compute verified excess from the ledger instead of recommending a full-order refund for every small discrepancy. A new price notice cannot retrospectively authorize an earlier undisclosed higher capture.

MP-GUIDE-11. Coverage: payment by other means

Application label: PAYMENT_BY_OTHER_MEANS. Primary clause: MP-PAY-09. Supporting clauses: MP-PAY-01, MP-PAY-07, MP-PAY-10 and MP-RET-10.

Required facts include the alleged alternative route, merchant approval where exceptional, cleared amount, beneficiary, obligation linkage and the disputed capture. An approved cleared transfer for the same order can establish excess collection. A screenshot for an unrelated recipient cannot.

This is an independently authored merchant rule introduced to ensure explicit coverage. Do not describe it as a policy discovered in Chewy's public documents. The model should request missing clearance or linkage instead of inventing that the merchant accepted the payment.

MP-GUIDE-12. Coverage: cancelled recurring billing

Application label: CANCELED_RECURRING_BILLING. Primary clauses: MP-AUTO-03 through MP-AUTO-07 and MP-AUTO-12 through MP-AUTO-14. Supporting clauses: MP-PAY-04, MP-PAY-08 and MP-PAY-10.

Required facts include consent, schedule ID, cycle ID, notice, planned dispatch, processing start, exact cancellation receipt time, current order creation, stop result and capture. A later capture can belong to an existing valid order; a new cycle created after cancellation has a different policy result.

Boundary cases use UTC instants and strict before-cutoff comparison. A reliably received support instruction can be timely even when an agent reads it later. Missing timestamps require review, not an invented event sequence.

MP-GUIDE-13. Coverage: other

Application label: OTHER. Primary clauses: MP-PAY-11, MP-GEN-10 and MP-GEN-15. Depending on the allegations, a more specific delivery, return or payment clause may later apply.

The model should summarize the complaint, retain secondary issues and ask focused questions. No explicit merchant rule found is a valid result when the request concerns unsupported products, veterinary outcomes or a topic beyond the corpus.

OTHER is not blanket coverage for every possible event. The assistant must avoid inventing an arbitration rule, digital-service refund promise or guaranteed consequential-loss payment simply to produce a confident answer.

MP-GUIDE-14. Retrieval and metadata recommendations

Use the five Markdown originals for text ingestion when possible; the PDFs are human-readable copies. Each MP clause is an initial chunk boundary. Keeping a complete clause together preserves the ordinary rule and its exceptions. Where a clause is later split, retain its clause ID on every child chunk.

Recommended fields are merchant_id, document_id, policy_version, effective_date, region, language, currency, clause_id, title, dataset_role, synthetic, source_path and text. The supplied policy_clauses.jsonl uses these fields. The ID merchant_maplepaw_ca_test prevents accidental mixing with a real retailer.

Retrieve by merchant and policy version before considering relevance. A query about recurring cancellation may need both the cutoff and support-receipt clause; a refund-delay query may need both the processing target and provider-status rule. Cross-document retrieval is expected.

Do not equate missing retrieval with absence of a policy. If search fails, try clause lookup or broader retrieval. Only claim no explicit rule after checking the relevant corpus. The manifest records operative clause counts and file hashes to help detect stale inputs.

MP-GUIDE-15. Evaluation questions and answer isolation

The companion test_cases.json supplies 27 synthetic cases: three per application reason. They include supported claims, apparent claims explained by other facts and cases with missing or conflicting evidence. They specify expected actions, relevant clauses, required observations and prohibited conclusions.

Test cases and expected answers must remain outside the policy retrieval index. Including the answer key would test answer lookup rather than the assistant's ability to apply merchant rules to case facts. The guide itself should also remain outside the blind index because it contains evaluation expectations.

A useful answer separates reported allegations, confirmed facts, missing facts, applicable clauses, recommended next action and execution status. It should cite clause IDs and case fact references. A recommendation to refund should state the proposed amount when calculable and note any human-approval condition.

MP-GUIDE-16. Scoring and limitations

Suggested evaluation dimensions are correct clause retrieval, exception handling, factual fidelity, state distinction, amount arithmetic, date arithmetic, evidence-gap detection and approval compliance. Award credit for an appropriate request for information when decisive evidence is absent.

Assess the assistant against facts available in the case. Do not penalize it for failing to know a later carrier event or an unprovided provider response. Track unsupported claims separately, especially statements of authorization, complete delivery, completed refund and guaranteed external success.

The corpus intentionally omits actual provider evidence matrices, live dispute action schemas, current legal advice, real tax rates and real customer history. Those belong to separate verified sources. A complete merchant-policy corpus is still only one part of dispute analysis: order, shipment, payment and communication facts remain necessary.
